Are you living with dementia?

Stopped driving or planning to stop?

A study being conducted at The University of Queensland is investigating ways to support people adjust to life without driving

Interested people (aged 65+ years) may be thinking about stopping driving, or have stopped driving.

Participation in our study will involve individual assessments about your needs and community life, and about your wellbeing over 8-9 months. Also, depending upon your locality, you will receive information and support for continuing to do the things that are important to you without driving, either at the beginning or end of the study.

If you are interested in knowing more about the study please contact the School of Psychology at The University of Queensland.

For Queensland Enquiries:
